Report for final project - Advanced Javascript

Sonia Sherpa

I created a function to do list as part of my final project for this class and I have included 5 components (header, footer, button, todo.js and todo.css). I have deployed my react app and the url is https://sonia828.github.io/AdvJS_Final/

I can enter chores that need to be done and once, clicked on the complete, it removes the count and once the task is completed, you can remove it as well.

I have 5 components in my app.

Screenshots testing its functionality:

Header, footer, and button:

Tasks left: (1)

~~laundry~~	Complete x
cook	Complete x

Add a new task
